

# What to know about the Williams Drive Enhancement Project

The City of Georgetown is planning enhancements for safety and traffic operations along Williams Drive from Austin Avenue to Jim Hogg Road. This effort builds upon the recommendations of the Williams Drive Study completed in 2017 and will provide design plans for improvements to safety, mobility, and connectivity for all who visit or travel along this corridor.

The City is gathering technical information and evaluating current traffic operations and safety data along the corridor, which will be used, along with input provided by the community, to develop solutions to reduce crashes and improve traffic flow. **Options that could be implemented along the corridor include:**

**Funding for this project has been secured through:**

- Georgetown 2021 Road Bond
- Federal funding sources

## Project Goals

- **Improve safety** through reduced crashes, injuries, and fatalities
- **Improve traffic operations and manage congestion** by better planning how vehicles, pedestrians and cyclists move throughout the corridor
- **Improve accessibility** by promoting safer travel to adjacent businesses and neighborhoods
- **Preserve public investment** in the existing transportation network
- **Engage the public** throughout the project development process and develop a community supported plan

The City encourages participation from the community throughout this process and input will be used to enhance and benefit project development. **To sign up to receive email updates or to view current engagement opportunities visit [transportation.georgetown.org/williams-drive](https://transportation.georgetown.org/williams-drive) or use the QR Code.**
